EDUCATION

The University of Texas at Dallas - USA ***May.2023***

Master of Science, Information Technology Management

B V Raju Institute of Technology – India ***May.2021***

Bachelor of Technology in Electronics & Communication Engineering

SKILLS

Python | SQL | Tableau | AWS Certified | ETL | PowerBI | R | Azure | Alteryx | Domo | MS Office | GCP | S3
Snowflake | Hadoop | Q Lik | C | MS Excel | PostgreSQL | Qlik | Oracle19C | SSMS | Agile

WORK EXPERIENCE

Florida Commerce, USA ***Oct.2024 – Present***

Sr Data Analyst

- As a **Government Operations Consultant** with the **Florida Department of Commerce**, conducted complex data analysis and reporting processes by collecting, cleaning, and transforming large datasets related to unemployment claims and assistance programs. Utilize advanced tools such as **SQL**, **Tableau**, **Alteryx**, and **Snowflake** to perform in-depth data queries, implement data validation, and produce accurate, insightful reports that support strategic decision-making across the department. Automate repetitive reporting tasks and improve data pipelines to optimize efficiency and reduce turnaround times for reports.
- Design, develop, and maintain a dynamic, interactive **Tableau** dashboard that visualizes real-time unemployment claims data for the **State of Florida**. The dashboard enables stakeholders to track trends, identify potential issues, and make data-driven decisions with ease. Collaborated with cross-functional teams to ensure the dashboard meets the needs of all departments and is updated based on feedback, ensuring its relevance and accuracy. Designed, implemented, and maintained end-to-end data pipelines using **Alteryx Designer**, enabling automated ingestion, transformation, and validation of large operational datasets.
- Collaborated with cross-functional teams and program directors to conduct ad hoc data requests, rapid data validations, and deep-dive statistical analyses using **SQL**, **Alteryx**, and **Python**. Performed regression and trend analysis to forecast claim surges, identify anomalies, and support policy impact assessments. Delivered findings through interactive **Tableau storyboards** and data-driven presentations that improved statewide decision-making efficiency.

Datics Inc, USA ***Aug.2023 – Oct.2024***

Data Engineer

- Designed and orchestrated robust **ETL** and **ELT pipelines** using **Python (Airflow, PySpark), SQL,** and **Azure Data Factory** to migrate and transform multi-source data from **SQL** Server, **PostgreSQL**, and external APIs into **Snowflake**. Implemented modularized **Python** scripts and parameterized **SQL** queries to standardize ingestion, automate **data validation**, and enhance system reliability across multiple environments.
- Ensured data governance, security, and compliance best practices in data handling, storage, and access. Supported continuous improvement of data systems by monitoring performance, resolving bottlenecks, and improving processing logic.
- Partnered with analytics and product teams to deliver **data-driven solutions** supporting executive dashboards, **KPI tracking**, and predictive analytics. Integrated datasets into **Power BI** for real-time visualization.

Hollerith IT Solutions LLC, **USA** ***Jan.2023 - May.2023***

Data Engineer Intern

- Integrated data using **ETL** processes, leveraging **SQL** and **Hadoop** tools to analyze large datasets and support decision-making across the organization. Developed dynamic dashboards and reports in **Tableau** and **Excel** to provide actionable insights for academic, administrative, and risk management performance.
- Earned **AWS Certified Cloud Practitioner** credential during the internship, demonstrating foundational cloud computing knowledge and the ability to design cost-efficient, scalable solutions. Assisted senior data engineers in developing and debugging **SQL** scripts, implementing data validation checks, and documenting transformation logic. Learned to leverage **AWS** services such as **S3, Glue**, and **Redshift** for cloud-based data ingestion and storage, contributing to small-scale proof-of-concept pipeline builds in a controlled sandbox environment.

Temple of Arts, India ***Sep.2019 - Jul.2021***

Business Data Analyst

- Collected, cleaned, and analyzed student enrollment and performance data using **Excel**, **Google Sheets**, and basic **SQL**, while building automated reports through **Power Query** and **Pivot Tables**. Visualized insights with **Google Data Studio** and **Tableau Public**, identifying key patterns in marketing performance that improved decision-making and boosted overall program revenue.
- Enhanced reporting efficiency by integrating **Excel VBA macros**, **Google Apps Script**, and **SharePoint** for automated and real-time data sharing across teams. Developed executive summaries and performance dashboards using **Power BI**, **PowerPoint**, and **Google Slides**, ensuring accuracy, visual consistency, and accessibility across multiple departments.
